Chat Bot

Python

Create a chat bot that will respond do various words or phrases. You should include a loop to allow the conversation to continue as long as the user does not say "bye".

You must allow the user to input a response every time and you must ask different questions.

For User Input, Utilize:

input("…")

For Conversational Messages, Utilize:

print('. . .')

To Make Decisions on what to respond, Utilize:

if *variable* == "word/phrase":

    code

elif *variable* == "word/phrase":

    code

else:

    code

BONUS:

Use a loop to continue the conversation.

For the Loop, Utilize:

while *conditional statement*:

    code
