Guessing Game

Python

Create a guessing game that includes a loop that will continue to ask for a response until the user wins.

You must display a message telling the user to input a number every time and let them know if they won or lost.

For User Input, Utilize:

eval(**input**(…))

For the Loop, Utilize:

while *conditional statement*:

    code

For Win/Loss Messages, Utilize:

print('. . .')

Bonus:

Utilize Modulus or Whole Number Division to calculate the number to be guessed.
